## Appendix I: Nonresponse Analysis

Nonresponse in the O*NET Data Collection Program can occur from any of three sources. Establishments can cause nonresponse when a business fails to participate at the verification, screening, recruiting, or sampling stage of selection. This type of nonresponse is referred to as establishment nonresponse. A second type of nonresponse, referred to as employee nonresponse, occurs at the employee level when a selected employee fails to complete and return a questionnaire. Finally, employees who return their questionnaires may inadvertently or intentionally skip one or more items on the questionnaire. This type of missing data is known as item nonresponse. These three types of nonresponse are discussed here.

The data analyzed here come from the Establishment Method data included in Analysis Cycles 19-21. ${ }^{1}$ Data from the Occupation Expert (OE) Method do not lend themselves to this type of analysis: OE Method respondents are not sampled through establishments and are often volunteer respondents not related to a target population from which bias can be measured.

## I. 1 How Nonresponse Is Related to Bias

Nonresponse bias is the expected difference between an estimate from the responding cases and an estimate from all cases originally selected from the target population. The extent to which nonresponse bias occurs ultimately depends on (1) the extent of missing data and (2) the difference in an estimate between respondents and nonrespondents. For example, consider the equation

$$
\begin{equation*}
\bar{X}=p_{R} \bar{X}_{R}+p_{N} \bar{X}_{N}, \tag{1}
\end{equation*}
$$

which says that an overall population estimate, $\bar{X}$, depends on the proportion of respondents and nonrespondents (denoted $p_{R}$ and $p_{N}$, respectively, with $p_{R}+p_{N}=1$ ) and the mean response from both respondents and nonrespondents (denoted $\bar{X}_{R}$ and $\bar{X}_{N}$ ). Bias due to nonresponse is given by the equation

$$
\begin{equation*}
\operatorname{Bias}\left(\bar{X}_{R}\right)=\bar{X}_{R}-\bar{X}, \tag{2}
\end{equation*}
$$

[^0]demonstrating that bias varies as a function of the overall population estimate and the mean response from respondents. In the estimate, the bias due to nonresponse increases as the difference between $\bar{X}_{R}$ and $\bar{X}$ increases. Substituting Equation (1) into Equation (2) gives
\[

$$
\begin{equation*}
\operatorname{Bias}\left(\bar{X}_{R}\right)=\bar{X}_{R}\left(1-p_{R}\right)-p_{N} \bar{X}_{N}, \tag{3}
\end{equation*}
$$

\]

and because $1-p_{R}=p_{N}$, Equation (3) can be expressed as

$$
\begin{equation*}
\operatorname{Bias}\left(\bar{X}_{R}\right)=p_{N}\left(\bar{X}_{R}-\bar{X}_{N}\right) \tag{4}
\end{equation*}
$$

Equation (4) reveals that the components of nonresponse bias depend on the proportion of nonrespondents in the eligible sample and the difference between mean responses for respondents and those for nonrespondents. If either or both components are small, then the bias should also be small. If important biases occur, usually a substantial proportion of nonrespondents ( $p_{N}$ ) exists and there is a large difference between the mean responses (Kish, 1965). When one uses sample data to approximate bias, the components $p_{N}, \bar{X}_{R}$, and $\bar{X}_{N}$ can be estimated with sample data across attributes that can be measured for both respondents and nonrespondents. Unless a special nonresponse follow-up study is conducted, it is rarely possible to measure any of the primary study outcome variables on the nonrespondents; if any such data existed, they would be on respondents. Thus, to obtain surrogates for the primary outcome variables, it is necessary to turn to other variables, those available for both respondents and nonrespondents. If respondent data indicate that the surrogate variables are related to the primary outcome variables, then any nonresponse bias, or lack thereof, observed in the surrogate variables can be inferred to the primary outcome variables. Such approximations are not deterministic but can evince potential nonresponse bias.

The likelihood of missing data may be related to an observed variable, such as the number of employees in a business establishment. For example, employees from larger establishments may be less likely to respond than employees from smaller establishments. Analyzing work activities, work context, or knowledge across jobs within an occupation could therefore be subject to bias if the work performed differs systematically by establishment size-that is, if employees in larger establishments tend to respond differently from employees in smaller establishments. In this hypothetical example, employees in larger establishments may be less likely to respond, and if they do respond, they may respond differently from employees in smaller establishments. This situation would cause both components of nonresponse $\operatorname{bias}\left(p_{N}\right.$ and $\left.\bar{X}_{R}-\bar{X}_{N}\right)$ to be magnified.

In general, restricting an analysis to only those cases that are observed may introduce bias into the results unless the missing-data mechanism is accounted for in the analysis (Graham, Hofer, \& Piccinin, 1994; Little \& Rubin, 1987; Schafer, 2000). Weighting is one common method of adjusting for
nonresponse patterns on the basis of observed values (Little \& Rubin, 1987). The O*NET Data Collection Program incorporates weighting as one method for protecting against the influence of nonresponse bias. ${ }^{2}$

## I. 2 Establishment Nonresponse

Appendix Exhibit I-1 displays the establishment eligibility and response rates for Analysis Cycles 19-21 by stage of data collection; Appendix Exhibit I-2 compares the distribution of respondents and nonrespondents across various establishment attributes. (All exhibits are at the end of this appendix.) The analysis population of establishments includes any establishment that had at least one of its assigned occupations published in Analysis Cycles 19-21, whether or not any of the occupations were eventually selected from that establishment. ${ }^{3}$ The rates and distributions are presented separately by various variables to allow examination of the possibility of nonresponse bias. These variables were selected because they were available for both respondents and nonrespondents and, on the basis of logistic regression modeling results of establishment-level response propensity, they were likely to be related to the primary outcome variables of the $\mathrm{O}^{*}$ NET Program.

The following describes the major row headings in Appendix Exhibits I-1 and I-2:

- Census Division is assigned according to the address of the establishment.
- Total Employees in Establishment is the establishment total employment estimate on the sample frame. The category unknown for total employees in an establishment is an actual frame classification.
- SIC Division is the Standard Industry Classification of the establishment.
- NAICS Sector is the North American Industry Classification System of the establishment.
- Number of Occupations on Establishment Sampling List is the number of occupations linked to an establishment's sampling list. This number may be viewed as a measure of the point of contact's (POC's) perceived level of burden.
- Time Zone and Metropolitan Status were assigned according to the establishment's ZIP code.

## I.2.1 Establishment Final Unweighted Response Rates

Appendix Exhibit I-1 displays the establishment eligibility and response rates for Analysis Cycles 19-21 by stage of data collection.

The following describes the Appendix Exhibit I-1 column headings:

- Total Estab is the total number of selected establishments at the verification stage.
- Verification, Screening, Recruiting, and Sampling refer to the four stages of data collection used in recruiting establishments. Only those establishments that responded at the previous stage were used in the computation of rates. For example, screening rates reflect only

[^1]establishments that responded at the verification stage. Final rates are combined rates across all stages of data collection. All establishments were considered to be eligible at the verification stage. At subsequent stages, nonrespondents from the previous stage were removed from the denominator of the eligibility rate; therefore, the final eligibility rate, defined as the total number of eligible establishments divided by the total establishments in the sample, is not equivalent to the product of the eligibility rates at each stage. Similarly, establishments that were identified as ineligible in the previous stage were not included in the denominator of the response rate for a particular stage. Thus, the final response rate, defined as the total number of responding establishments divided by the total number of eligible establishments in the sample, is not the product of the response rates at each stage.

- Elig is the percentage of establishments that were considered eligible. Establishments are considered survey eligible if they are classified as (1) at the same street address or building as in the sampling frame, (2) in business (permanently or temporarily), (3) able to be located, and (4) not a duplicate.
- Resp is the percentage of eligible establishments that were considered respondents; that is, they did not refuse to participate in the study. This includes participating establishments where none of the target occupations were present.

The data in Appendix Exhibit I-1 reveal that the final unweighted response rate for establishments was $65.0 \%$. The final eligibility rate was $78.5 \% .^{4}$ The data also indicate that response rates varied for the four data collection stages, with the lowest response rate occurring at the recruiting stage ( $79.8 \%$ ) and the lowest eligibility rate occurring at the verification stage ( $82.0 \%$ ). These results are intuitive for the following reasons:

- Typically, it is not until the recruiting stage of data collection that the POC realized the burden involved in participation. Consequently, it is expected that most nonresponse would occur at this stage.
- The lowest eligibility rate is expected at the verification stage, when each establishment is first contacted and when establishments that closed or moved their businesses are first identified.

Using frame information, one can compare the respondents and nonrespondents across various attributes to approximate nonresponse bias. An estimate of the first source of nonresponse bias can be found in Appendix Exhibit I-1 under the column headed Final Resp. As mentioned above, low response rates indicate possible nonresponse bias. RTI assessed the response rate for each level of a specific attribute against the overall value to determine whether the difference was significant. This assessment was conducted separately for each stage of data collection. Differences statistically significant at the 0.05 level are indicated with an asterisk (*). ${ }^{5}$

[^2]Census Division. Establishments in the West North Central region (70.1\%) had the highest significant final response rate, whereas the Middle Atlantic region (61.7\%) had the lowest significant final response rate.

Total Employees in Establishment. For establishments with 5 to 1,000+ employees, a general decreasing trend appears in the final response rates as the size of the establishment increases. This pattern suggests that the perceived burden on the POCs in smaller establishments may have been lower than the perceived burden on the POCs in larger establishments. In addition, in larger organizations, participation may not be at the discretion of the POC but instead may require corporate approval. This observation is consistent with those in other literature (e.g., Willimack, Nichols, \& Sudman, 2002).

SIC Division. Comparing the response rates of the different SIC divisions with the overall final response rate, one sees that Public Administration (78.5\%) had a significantly higher final response rate, whereas the Finance, Insurance, Real Estate (48.4\%) industry had the lowest significant final response rate. ${ }^{6}$

NAICS Sector. Comparing the response rates of the different NAICS sectors to the overall final response rate, one sees that Public Administration (78.5\%) had the highest significant final response rate, and Finance and Insurance (47.6\%) had the lowest significant final response rate. ${ }^{6}$

Number of Occupations on Establishment Sampling List. The final response rate for establishments with $1-5$ occupations on the sampling list was significantly higher than the overall final response rate ( $69.2 \%$, as opposed to $65.0 \%$ ), and establishments with 9 occupations on the sampling list had the lowest significant final response rate ( $48.7 \%$ ).

Time Zone. Establishments in the Alaska Standard Time zone had the highest significant final response rate (78.2\%). Establishments in the Pacific Standard Time zone had a significantly lower final response rate ( $62.0 \%$ ).

Metropolitan Status. Rural establishments had a final response rate significantly higher than the overall response rate ( $71.8 \%$ vs $65.0 \%$ ), whereas urban establishments had a significantly lower final response rate ( $63.3 \%$ ).

## I.2.2 Comparison of Establishment Respondents and Nonrespondents

Appendix Exhibit I-2 shows a comparison of the distribution of respondents and the distribution of nonrespondents across various establishment attributes. The column showing Percent Difference (Resp $v s$. Nonresp) gives an estimate of the second component of the nonresponse bias formula (Equation [4]). An estimate of the nonresponse bias across an attribute (see Equation [2]) is shown under the final column, Percent Difference (Resp vs. Overall). As discussed above, a potential source of nonresponse bias occurs when this difference becomes large. Differences in the final column marked with an asterisk

[^3]are statistically different from zero at the 0.05 level. Large positive or negative values indicate possible nonresponse bias. Although numerous statistically significant differences exist, large sample sizes tend to increase the likelihood that very small differences will be statistically significant. In this situation, it is important to determine whether the differences are of sufficient magnitudes to be meaningful. For establishment nonresponse, the differences between respondents and the overall sample do not appear to be meaningful: $83.9 \%$ of the attributes had an absolute difference of less than 1 percentage point, $4.8 \%$ had an absolute difference of at least 1 but less than 2 percentage points, and $11.3 \%$ had an absolute difference of 2 or more percentage points (with a maximum difference of 4.8 percentage points). ${ }^{7}$

Another measure of potential nonresponse bias is the effect size, as defined by Cohen (1988). In this case, the effect size is related to the chi-square test for comparing the equivalence of percentage distributions from respondents with those of the overall sample. The effect size, $w$, is calculated using the following formula:

$$
\begin{equation*}
w=\sqrt{\sum_{i=1}^{m} \frac{\left(p_{o i}-p_{1 i}\right)^{2}}{p_{o i}}}, \tag{5}
\end{equation*}
$$

where $m$ represents the number of categories (e.g., Census division), $p_{0 i}$ is the overall distribution, and $p_{1 i}$ represents the distribution among the respondents.

According to the guidelines suggested by Cohen, an effect size is classified as "small" when it is about 0.10 , as "medium" when it is about 0.30 , and as "large" when it is about 0.50 . For the variables in Appendix Exhibit I-2, all of the effect sizes were small, with the largest effect size being equal to 0.12 for NAICS Sector. These results suggest that the distribution of the variables for respondents and that for nonrespondents are quite similar (i.e., $\bar{X}_{R}-\bar{X}_{N}$ is small).

The combination of relatively small absolute differences and small effect sizes indicates a low likelihood of bias due to establishment nonresponse.

## I. 3 Employee Nonresponse

Like establishment nonresponse, employee nonresponse is difficult to thoroughly characterize in the O*NET Data Collection Program because relatively little information is known about the nonrespondents (except for some descriptive frame characteristics). However, as with the establishment level, using information known about both responding and nonresponding employees enables indirect determination of whether the nonrespondents are different from the respondents across variables that may be highly correlated with the survey data being collected. In this way, potential sources of nonresponse bias can be approximated at the employee level.

Appendix Exhibit I-3 displays the unweighted response rates for employees; Appendix Exhibit I-4 compares the distribution of respondents and nonrespondents across various employee

[^4]attributes from Establishment Method data collection for occupations published in Analysis Cycles 19-21. ${ }^{8}$

In addition to the categories displayed in Appendix Exhibits I-1 and I-2, Appendix Exhibits I-3 and I-4 also display response rates by the following employee-level characteristics (rows):

- Total Selected Employees in Establishment is the number of employees who were selected from the establishment. Note that this value ranges only from 1 to 20 . This range reflects the rule that no more than 20 employees may be selected from any single establishment per 12-month period.
- Questionnaire Type is the type of questionnaire that the employee was selected to complete. There are three questionnaire types: Work Activities, Work Context, and Knowledge.
- Occupation Class is derived from the first two digits of the $\mathrm{O}^{*}$ NET occupation code.

The response rates are presented separately by the various row variables to reveal any possibility of nonresponse bias. These variables were selected because they were available for both respondents and nonrespondents and, on the basis of logistic modeling results of both establishment-level and employeelevel response propensity, they were likely to be related to the primary outcome variables of the $\mathrm{O}^{*}$ NET Program.

## I.3.1 Employee Final Unweighted Response Rates

An estimate of the second source of nonresponse bias can be found in Appendix Exhibit I-3 under the column headed Response Rate. As discussed in Section I-1, low response rates may indicate nonresponse bias. RTI assessed the response rate for each level of a specific covariate against the overall value to determine whether the difference was significant. Differences statistically significant at the 0.05 level are indicated with an asterisk $(*) .{ }^{9}$

Census Division. Employees in the Mountain region had the highest significant response rate ( $61.2 \%$ ), whereas employees in the Pacific region had the lowest significant response rate (53.6\%). The overall response rate was $57.5 \%$.

Total Employees in Establishment. The response rate for employees from establishments with $1-4$ employees had the highest significant response rate ( $68.6 \%$ ). The lowest significant response rate was for employees from establishments with $1,000+$ employees ( $47.2 \%$ ). The overall response rate was $57.5 \%$.

SIC Division. Employees in the Mining industry had the highest significant response rate (63.8\%). Employees from the Retail Trade industry had the lowest significant response rate (50.0\%).

[^5]NAICS Sector. Employees in the Utilities sector had the highest significant response rate (71.1\%). ${ }^{10}$ Employees in the Accommodation and Food Services sector had the lowest significant response rate (46.8\%).

Total Selected Employees in Establishment. The highest significant response rate was for employees from establishments with only 1 selected employee ( $68.8 \%$ ). The lowest significant response rate was for employees from establishments with 19 employees selected (45.8\%).

Questionnaire Type. The Work Context questionnaire had a significantly higher response rate (59.2\%) than the overall response rate of $57.5 \%$. The Work Activities questionnaire had a significantly lower response rate (56.0\%).

Number of Occupations on Establishment Sampling List. The final response rate for establishments with $1-5$ occupations on the sampling list was significantly higher than the overall final response rate ( $61.6 \%$, as opposed to $57.5 \%$ ), and establishments with 6 occupations on the sampling list had the lowest significant final response rate ( $47.3 \%$ ).

Occupation Class. Farming, Fishing, and Forestry Occupations had the highest significant response rate ( $69.5 \%$ ) compared to the overall response rate ( $57.5 \%$ ). Building and Grounds Cleaning and Maintenance Occupations had the lowest significant response rate (44.2\%). ${ }^{11}$

Time Zone. The response rate in the Mountain Standard Time zone (62.0\%) was significantly higher than the overall response rate ( $57.5 \%$ ). The response rate in the Pacific Standard Time zone (53.7\%) was significantly lower than the overall response rate.

Metropolitan Status. The response rate for employees in a rural area was significantly higher than the overall response rate ( $61.3 \%$ and $57.5 \%$, respectively), and the response rate for employees in an urban area was significantly lower (56.2\%).

## I.3.2 Comparison of Employee Respondents and Nonrespondents

Appendix Exhibit I-4 presents a comparison of the distribution of respondents and nonrespondents across various employee attributes. The column Percent Difference (Resp vs. Nonresp) reveals an estimate of the second component of the nonresponse bias formula (see Equation [4]). The column Percent Difference (Resp vs. Overall) shows an estimate of the nonresponse bias across an attribute (see Equation [2]). As discussed above, a potential source of nonresponse bias occurs when this difference becomes large. Resp vs. Overall differences marked with an asterisk are statistically different from zero at the 0.05 level. Large positive or negative values indicate possible nonresponse bias. Although numerous statistically significant differences exist, large sample sizes tend to increase the likelihood that very small differences will be statistically significant. In this situation, it is important to

[^6]determine whether the differences are of sufficient magnitudes to be meaningful. For employee nonresponse, the differences between respondents and the overall sample do not appear to be meaningful; for example, $86.9 \%$ of the attributes had an absolute difference of less than 1 percentage point, $11.2 \%$ had an absolute difference of at least 1 but less than 2 percentage points, and $1.9 \%$ had an absolute difference of 2 or more percentage points. ${ }^{11}$

Another measure of potential nonresponse bias is the effect size, as defined by Cohen (1988). See Section D.2.2 for a full explanation. For the variables in Appendix Exhibit I-4, all of the effect sizes were small, with the largest effect size being equal to 0.10 for Total Selected Employees in Establishment. The combination of small absolute differences and very small effect sizes indicates a low likelihood of bias due to employee nonresponse.

## I. 4 Item Nonresponse

Appendix Exhibits I-5 through I-11 display unweighted item response rates by item, item type, and occupation for Establishment Method data included in Analysis Cycles 19-21. These tables include questionnaire data from employee respondents in the occupations published in Analysis Cycles 19-21 and completed under the Establishment Method. Only items from those questionnaires that satisfied all completeness and quality requirements were evaluated. Cases that did not satisfy such requirements were included as nonrespondents in the employee nonresponse analysis in Section D.3.

Item nonresponse is analogous to partial-information patterns in which some variables are observed and some are missing. Even though partial information is present, item nonresponse can still create biased parameter estimation if the missing values are systematically related to the outcome (e.g., wealthy respondents tend to leave an income question unanswered).

Work Activities, Work Context, and Knowledge. The data in Appendix Exhibits I-5 through I-7 suggest that, for the Work Activities, Work Context, and Knowledge Questionnaires, little item nonresponse exists with respect to any single item on any questionnaire. The lowest response rate for any specific item in each questionnaire is $95.2 \%$ for Work Activities Questionnaire Item 22 (Level), $97.6 \%$ for Work Context Questionnaire Item 49, and 91.7\% for Knowledge Questionnaire Item 8 (Level). In addition, as seen in Appendix Exhibit I-10, item nonresponse is slightly more prevalent for Level items than for Importance items, regardless of questionnaire type.

Occupation-Specific Tasks. It appears from Appendix Exhibit I-8 that item nonresponse may be more serious for certain Frequency and Importance items than for others and for some occupations more than others (e.g., 37-2012.00, Maids and Housekeeping Cleaners, accounted for 5 of the top 10 lowest item response rates). It should be noted, however, that the eligible sample size is small for these Frequency and Importance items because a responding employee is not required to respond to the corresponding Frequency and Importance item if he or she does not consider a task to be relevant.

Background Questionnaire. In Appendix Exhibit I-9, the item response rates appear to be nearly constant and high (nearly $94 \%$ or greater), with the exception of Item 4 ( $89.2 \%$ ), which elicits information from the respondent about working in a family business.

Item Type. All the response rates by item type were $96.0 \%$ or higher (Appendix Exhibit I-10).
Occupation. Item response rates are provided in Appendix Exhibit I-11 for all occupations completed in Analysis Cycles 19-21. The overall item response rate was $97.9 \%$, with the lowest response rate, $93.3 \%$, coming from Maids and Housekeeping Cleaners (occupation code 37-2012.00). The highest response rate, $99.4 \%$, came from Range Managers (occupation code 19-1031.02).

The extremely high item response rates indicate a low likelihood of bias due to item nonresponse.

## I. 5 Conclusion

Unit and item nonresponse can lead to biased inferences if the nonresponse rates are high and respondents and nonrespondents differ with regard to the characteristics of interest. An examination of both establishment and employee response rates revealed that nonresponse patterns were somewhat related to essentially all variables considered in the analyses; however, when examined, the distribution of respondents and nonrespondents across various frame attributes showed that the overall potential for nonresponse bias at both the establishment and employee levels was negligible. Because nonresponse patterns for both establishments and employees are related to the substantive variables measured in the study, using these variables for nonresponse adjustments to the analysis weights should be effective in reducing the minimal effects, if any, due to nonresponse bias in the analysis.

At the item level, it was found that different questionnaire types and questions exhibited varying response rates, and in most cases the response rates were extremely high. This finding coincides with the findings at the establishment and employee levels - that is, that the potential for significant nonresponse bias due to item nonresponse is negligible.

## Appendix Exhibit I-1. Establishment Eligibility and Response Rates (Percent)

| Category | Total Estab | Verification |  | Screening |  | Recruiting |  | Sampling |  | Final |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Elig | Resp | Elig | Resp | Elig | Resp | Elig | Resp | Elig | Resp |
| Total | 50,808 | 82.0 | 96.9 | 96.9 | 88.1 | 99.4 | 79.8 | 100.0 | 95.9 | 78.5 | 65.0 |

Note: Response rates were calculated from those establishments that were classified as eligible at each step. Final rates are combined rates across all stages of data collection. For each stage, nonrespondents from the previous stage are removed from the denominator of the eligibility rate; therefore, the final eligibility rate, defined as the total number of eligible establishments divided by the total establishments in the sample, is not equivalent to the product of the eligibility rates at each stage. Similarly, establishments that were identified as ineligible in the previous stage were not included in the denominator of the response rate for a particular stage. Consequently, the final response rate, defined as the total number of responding establishments divided by the total number of eligible establishments in the sample, is not the product of the response rates at each stage. Statistical tests were conducted only for categories with two or more establishments. SIC = Standard Industrial Classification. NAICS $=$ North American Industry Classification System. Beginning in 2017, RTI no longer samples under the category of 5,000 or more Total Employees in an Establishment. The category of 1,000-4,999 employees and 5,000 or more employees has been collapsed to $1,000+$ to reflect the updated employee categories provided by Dun and Bradstreet, the frame vendor.

SIC $=$ Standard Industrial Classification. NAICS $=$ North American Industry Classification System.
*Statistically different from the total category at the 0.05 level.

| Pacific Standard Time | 4,652 | 53.7* |
| Alaska Standard Time | 177 | 61.6 |
| Hawaii Standard Time | 159 | 54.7 |
| Metropolitan Status |  |  |
| Rural | 8,076 | 61.3* |
| Urban | 24,207 | 56.2* |

Note: Statistical tests conducted only for categories with two or more employees. N/A = not applicable, SIC $=$ Standard Industrial Classification. NAICS = North American Classification System. Beginning in 2017, RTI no longer samples under the category of 5,000 or more Total Employees in an Establishment. The category of 1,0004,999 employees and 5,000 or more employees has been collapsed to $1,000+$ to reflect the updated employee categories provided by Dun and Bradstreet, the frame vendor.
A dash (-) indicates that estimates do not apply because sample was not observed. SIC $=$ Standard Industrial Classification. NAICS = North American Industry Classification System.
*Statistically different from the total category at the 0.05 level.

## Appendix l-24

## Appendix Exhibit l-4. Comparison of Employee Respondents and Nonrespondents (continued)

| Category | Respondents |  | Nonrespondents |  | Overall |  | Percent Difference Resp vs. Nonresp | Percent Difference Resp vs. Overall |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \% | No. | \% | No. | \% |  |  |
| Time Zone (effect size $=0.03$ ) |  |  |  |  |  |  |  |  |
| Eastern Standard Time | 8,721 | 47.0 | 6,370 | 46.4 | 15,091 | 46.7 | 0.6 | 0.3 |
| Central Standard Time | 5,515 | 29.7 | 4,067 | 29.6 | 9,582 | 29.7 | 0.1 | 0.0 |
| Mountain Standard Time | 1,626 | 8.8 | 996 | 7.3 | 2,622 | 8.1 | 1.5 | 0.6* |
| Pacific Standard Time | 2,496 | 13.5 | 2,156 | 15.7 | 4,652 | 14.4 | -2.3 | -1.0 * |
| Alaska Standard Time | 109 | 0.6 | 68 | 0.5 | 177 | 0.5 | 0.1 | 0.0 |
| Hawaii Standard Time | 87 | 0.5 | 72 | 0.5 | 159 | 0.5 | -0.1 | -0.0 |
| Metropolitan Status (effect size $=0.04$ ) |  |  |  |  |  |  |  |  |
| Rural | 4,953 | 26.7 | 3,123 | 22.7 | 8,076 | 25.0 | 3.9 | 1.7* |
| Urban | 13,601 | 73.3 | 10,606 | 77.3 | 24,207 | 75.0 | -3.9 | -1.7* |

Notes: The percentages shown for each domain for Respondents, Nonrespondents, and Overall may not sum to $100 \%$ due to rounding. Because of rounding, the difference columns may not match their constituent parts. Statistical tests conducted only for categories with two or more employees. Percent differences are not calculated for the Total row. Beginning in 2017, RTI no longer samples under the category of 5,000 or more Total Employees in an Establishment. The category of 1,000-4,999 employees and 5,000 or more employees has been collapsed to $1,000+$ to reflect the updated employee categories provided by Dun and Bradstreet, the frame vendor.

A dash (-) indicates that estimates do not apply because sample was not observed for either respondents or nonrespondents. N/A $=$ not applicable, NAICS $=$ North American Classification System, SIC $=$ Standard Industrial Classification.
*Statistically different from zero at the 0.05 level.

## Appendix Exhibit I-5.

## Ten Lowest Item Response Rates, Work Activities Questionnaire

| Item and Description |  | Sampled | Response Rate |
| :---: | :---: | :---: | :---: |
| B22-Level | Servicing, repairing, adjusting, and testing machines, devices, moving parts, and equipment that operate primarily on the basis of mechanical (not electronic) principles. | 2,553 | 95.2 |
| B21-Level | Providing documentation, detailed instructions, drawings, or specifications to tell others about how devices, parts, equipment, or structures are to be fabricated, constructed, assembled, modified, maintained, or used. | 2,386 | 95.3 |
| B23-Level | Servicing, repairing, calibrating, regulating, fine-tuning, or testing machines, devices, and equipment that operate primarily on the basis of electrical or electronic (not mechanical) principles. | 2,644 | 95.7 |
| B32-Level | Performing for people or dealing directly with the public. This includes serving customers in restaurants and stores, and receiving clients or guests. | 4,162 | 95.7 |
| B05-Level | Estimating sizes, distances, and quantities; or determining time, costs, resources, or materials needed to perform a work activity. | 4,354 | 95.8 |
| B40-Level | Recruiting, interviewing, selecting, hiring, and promoting employees in an organization. | 2,849 | 95.8 |
| B06-Level | Assessing the value, importance, or quality of things or people. | 4,866 | 96.2 |
| B13-Level | Establishing long-range objectives and specifying the strategies and actions to achieve them. | 4,756 | 96.2 |
| B20-Level | Running, maneuvering, navigating, or driving vehicles or mechanized equipment, such as forklifts, passenger vehicles, aircraft, or water craft. | 2,833 | 96.2 |
| B18-Level | Using either control mechanisms or direct physical activity to operate machines or processes (not including computers or vehicles). | 3,639 | 96.3 |
| B09-Level | Identifying the underlying principles, reasons, or facts of information by breaking down information or data into separate parts. | 4,804 | 96.4 |
| B25-Level | Translating or explaining what information means and how it can be used. | 4,810 | 96.4 |
| B02-Level | Identifying information by categorizing, estimating, recognizing differences or similarities, and detecting changes in circumstances or events. | 5,221 | 96.5 |
| B30-Level | Convincing others to buy merchandise/goods or to otherwise change their minds or actions. | 3,529 | 96.5 |
| B04-Level | Inspecting equipment, structures, or materials to identify the cause of errors or other problems or defects. | 4,277 | 96.7 |
| B41-Level | Monitoring and controlling resources and overseeing the spending of money. | 3,776 | 96.7 |

## Appendix l-26

Appendix Exhibit l-5. Ten Lowest Item Response Rates, Work Activities Questionnaire (continued)

| Item and Description | Sampled | Response <br> Rate |  |
| :--- | :--- | :---: | :---: |
| B11-Level | Developing, designing, or creating new applications, ideas, <br> relationships, systems, or products, including artistic <br> contributions. | 4,951 | 96.8 |
| B14-Level | Scheduling events, programs, and activities, as well as the work of <br> others. | 4,701 | 96.8 |

Note. 18 items are shown because of ties in response rates.

## Appendix Exhibit I-6. Ten Lowest Item Response Rates, Work Context Questionnaire

| Item and Description |  | Sampled | Response Rate |
| :---: | :---: | :---: | :---: |
| D49 | How automated is the job? | 5,739 | 97.6 |
| D01 | How often do you have to have face-to-face discussions with individuals or teams in this job? | 5,739 | 97.8 |
| D45 | How serious would the result usually be if the worker made a mistake that was not readily correctable? | 5,739 | 97.8 |
| D47 | How frequently is the worker required to make decisions that affect other people, the financial resources, and/or the image and reputation of the organization? | 5,739 | 98.1 |
| D39 | How much does this job require keeping or regaining your balance? | 5,739 | 98.2 |
| D53 | To what extent does this job require the worker to compete or to be aware of competitive pressures? | 5,739 | 98.2 |
| D09 | How important is it to coordinate or lead others in accomplishing work activities in this job? | 5,739 | 98.4 |
| D29 | How often does this job require exposure to disease/infections? | 5,739 | 98.4 |
| D05 | How often does the job require written letters and memos? | 5,739 | 98.5 |
| D25 | How often does this job require working exposed to contaminants (such as pollutants, gases, dust or odors)? | 5,739 | 98.5 |
| D51 | How important is repeating the same physical activities (e.g., key entry) or mental activities (e.g., checking entries in a ledger) over and over, without stopping, to performing this job? | 5,739 | 98.5 |
| D23 | How often does this job require working in very hot (above 90 F degrees) or very cold (below 32 F degrees) temperatures? | 5,739 | 98.6 |
| D55 | How important is it to this job that the pace is determined by the speed of equipment or machinery? (This does not refer to keeping busy at all times on this job.) | 5,739 | 98.6 |
| D03 | How often do you have telephone conversations in this job? | 5,739 | 98.7 |
| D11 | How responsible is the worker for work outcomes and results of other workers? | 5,739 | 98.7 |
| D13 | How frequently does the worker have to deal with unpleasant, angry, or discourteous individuals as part of the job requirements? | 5,739 | 98.7 |
| D15 | How often does this job require working indoors in environmentally controlled conditions? | 5,739 | 98.8 |
| D21 | To what extent does this job require the worker to perform job tasks in close physical proximity to other people? | 5,739 | 98.8 |
| D33 | How often does this job require exposure to minor burns, cuts, bites, or stings? | 5,739 | 98.8 |
| D46 | What results do your decisions usually have on other people or the image or reputation or financial resources of your employer? | 5,739 | 98.8 |
| D17 | How often does this job require working outdoors, exposed to all weather conditions? | 5,739 | 98.9 |

## Appendix l-28

## Appendix Exhibit I-6. Ten Lowest Item Response Rates, Work Context Questionnaire (continued)

| Item and Description | Sampled | Response <br> Rate |  |
| :--- | :--- | :---: | :---: |
| D19 | How often does this job require working in an open vehicle or equipment <br> (e.g., tractor)? | 5,739 | 98.9 |
| D28 | How often does this job require exposure to radiation? | 5,739 | 98.9 |
| D40 | How much does this job require using your hands to handle, control, or <br> feel objects, tools or controls? | 5,739 | 98.9 |
| D41 | How much does this job require bending or twisting your body? | 5,739 | 98.9 |
| D43 | How much does this job require wearing common protective or safety <br> equipment such as safety shoes, glasses, gloves, hard hats or life jackets? | 5,739 | 98.9 |

Note. 26 items are shown because of ties in response rates.

## Appendix Exhibit I-7.

## Ten Lowest Item Response Rates, Knowledge Questionnaire

| Item | Item Description | Sampled | Response Rate |
| :---: | :---: | :---: | :---: |
| E08-Level | Knowledge of techniques and equipment for planting, growing, and harvesting food products (both plant and animal) for consumption, including storage/handling techniques. | 1,139 | 91.7 |
| E26-Level | Knowledge of the theory and techniques required to compose, produce, and perform works of music, dance, visual arts, drama, and sculpture. | 1,564 | 94.1 |
| E12-Level | Knowledge of materials, methods, and the tools involved in the construction or repair of houses, buildings, or other structures such as highways and roads. | 1,835 | 95.2 |
| E27-Level | Knowledge of historical events and their causes, indicators, and effects on civilizations and cultures. | 2,224 | 95.7 |
| E07-Level | Knowledge of raw materials, production processes, quality control, costs, and other techniques for maximizing the effective manufacture and distribution of goods. | 3,060 | 95.9 |
| E17-Level | Knowledge of plant and animal organisms, their tissues, cells, functions, interdependencies, and interactions with each other and the environment. | 2,066 | 96.0 |
| E10-Level | Knowledge of the practical application of engineering science and technology. This includes applying principles, techniques, procedures, and equipment to the design and production of various goods and services. | 2,906 | 96.1 |
| E11-Level | Knowledge of design techniques, tools, and principles involved in production of precision technical plans, blueprints, drawings, and models. | 2,667 | 96.3 |
| E25-Level | Knowledge of the structure and content of a foreign (non-English) language including the meaning and spelling of words, rules of composition and grammar, and pronunciation. | 2,487 | 96.3 |
| E21-Level | Knowledge of the information and techniques needed to diagnose and treat human injuries, diseases, and deformities. This includes symptoms, treatment alternatives, drug properties and interactions, and preventive health-care measures. | 2,264 | 96.4 |
| E15-Level | Knowledge and prediction of physical principles, laws, their interrelationships, and applications to understanding fluid, material, and atmospheric dynamics, and mechanical, electrical, atomic and sub- atomic structures and processes. | 2,461 | 96.5 |
| E22-Level | Knowledge of principles, methods, and procedures for diagnosis, treatment, and rehabilitation of physical and mental dysfunctions, and for career counseling and guidance. | 2,786 | 96.5 |
| E28-Level | Knowledge of different philosophical systems and religions. This includes their basic principles, values, ethics, ways of thinking, customs, practices, and their impact on human culture. | 2,522 | 96.5 |

Note. 13 items are shown because of ties in response rates.

## Appendix Exhibit l-8. Ten Lowest Item Response Rates, Task Questionnaire

| Item | Item Description | Sampled | Response Rate |
| :---: | :---: | :---: | :---: |
| 37-2012.00, Maids and Housekeeping Cleaners: T18-Frequency | Purchase or order groceries and household supplies to keep kitchens stocked and record expenditures. | 17 | 41.2 |
| 47-2061.00, Construction Laborers: T28Importance | Use computers or other input devices to control robotic pipe cutters or cleaners. | 7 | 42.9 |
| 51-6091.00, Extruding and Forming Machine Setters, Operators, and Tenders, Synthetic and Glass Fibers: T7-Frequency | Pass sliver strands through openings in floors to workers on floors below who wind slivers onto tubes. | 7 | 42.9 |
| 37-2012.00, Maids and Housekeeping Cleaners: T25-Frequency | Care for children or elderly persons by overseeing their activities, providing companionship, and assisting them with dressing, bathing, eating, and other needs. | 15 | 46.7 |
| 51-6091.00, Extruding and Forming Machine Setters, Operators, and Tenders, Synthetic and Glass Fibers: T4-Frequency | Turn petcocks to adjust the flow of binding fluid to sleeves. | 11 | 54.5 |
| 13-2011.01, Accountants: T2-Frequency | Serve as bankruptcy trustees or business valuators. | 9 | 55.6 |
| 45-2021.00, Animal Breeders: T15Frequency | Attach rubber collecting sheaths to genitals of tethered bull and stimulate animal's organ to induce ejaculation. | 9 | 55.6 |
| 51-6091.00, Extruding and Forming Machine Setters, Operators, and Tenders, Synthetic and Glass Fibers: T7-Importance | Pass sliver strands through openings in floors to workers on floors below who wind slivers onto tubes. | 7 | 57.1 |
| 37-2012.00, Maids and Housekeeping Cleaners: T1-Frequency | Plan menus and cook and serve meals and refreshments following employer's instructions or own methods. | 17 | 58.8 |
| 37-2012.00, Maids and Housekeeping Cleaners: T6-Importance | Run errands, such as taking laundry to the cleaners and buying groceries. | 20 | 60.0 |
| 37-2012.00, Maids and Housekeeping Cleaners: T6-Frequency | Run errands, such as taking laundry to the cleaners and buying groceries. | 20 | 60.0 |
| 33-9011.00, Animal Control Workers: T5Frequency | Train police officers in dog handling and training techniques for tracking, crowd control, and narcotics and bomb detection. | 13 | 61.5 |
| 27-4031.00, Camera Operators, Television, Video, and Motion Picture: T25-Frequency | Receive raw film stock and maintain film inventories. | 8 | 62.5 |

Note. 13 items are shown because of ties in response rates.

## Appendix Exhibit I-9. Response Rates, Background Questionnaire

|  | Item and Description | Sampled | Response Rate |
| :---: | :---: | :---: | :---: |
| 2 | How long at job? | 16,987 | 99.3 |
| 3 | Employment sector | 16,987 | 96.2 |
| 4 | Family business | 16,987 | 89.2 |
| 5 | Age group | 16,987 | 95.5 |
| 6 | Gender | 16,987 | 98.0 |
| 7 | Ethnicity | 16,987 | 97.2 |
| 8 | Race | 16,987 | 93.8 |
| 9 | Education level | 16,987 | 99.1 |
| 10 | Deafness or serious difficulty hearing | 16,987 | 98.6 |
| 11 | Blind or serious difficulty seeing even when wearing glasses | 16,987 | 98.4 |
| 12 A | Serious difficulty concentrating, remembering, or making decisions | 16,987 | 97.9 |
| 12B | Serious difficulty walking or climbing stairs | 16,987 | 98.5 |
| 12 C | Difficulty dressing or bathing | 16,987 | 98.2 |
| 13 | Difficulty doing errands alone because of a physical, mental, or emotional condition | 16,987 | 98.3 |

## Appendix Exhibit I-10. Item Response Rates by Item Type

| Item Type |  | Response <br> Rate |
| :--- | :---: | :---: |
| TOTAL | Questions | $9,242,778$ |
| B--Work Activities--Importance | 228,124 | 97.9 |
| B--Work--Activities--Level | 182,799 | 98.7 |
| D--Work Context | 327,123 | 96.9 |
| E--Knowledge--Education and Training | 22,736 | 98.9 |
| E--Knowledge--Importance | 187,572 | 98.9 |
| E--Knowledge--Level | 107,932 | 98.7 |
| E--Knowledge--Work Styles Background | 90,944 | 97.1 |
| Background | 135,896 | 99.4 |
| Task--Relevance | 374,238 | 96.0 |
| Task--Importance | 292,707 | 98.9 |
| Task--Frequency | 292,707 | 97.1 |

## Appendix Exhibit l-11. Item Response Rates by Occupation

| SOC Code | SOC Title | Questions | Response Rate |
| :---: | :---: | :---: | :---: |
| TOTAL |  | 2,242,778 | 97.9 |
| 37-2012.00 | Maids and Housekeeping Cleaners | 11,891 | 93.3 |
| 47-2051.00 | Cement Masons and Concrete Finishers | 9,211 | 94.2 |
| 51-9123.00 | Painting, Coating, and Decorating Workers | 5,984 | 94.6 |
| 31-1014.00 | Nursing Assistants | 13,535 | 94.7 |
| 51-6064.00 | Textile Winding, Twisting, and Drawing Out Machine Setters, Operators, and Tenders | 8,632 | 95.1 |

| 47-1011.00 | First-Line Supervisors of Construction Trades and Extraction Workers | 12,087 | 98.7 |
| 47-2072.00 | Pile-Driver Operators | 6,251 | 98.7 |
| 53-7121.00 | Tank Car, Truck, and Ship Loaders | 10,274 | 98.7 |
| 11-9041.00 | Architectural and Engineering Managers | 7,730 | 98.8 |
| 11-9199.02 | Compliance Managers | 11,700 | 98.8 |
| 17-2151.00 | Mining and Geological Engineers, Including Mining Safety Engineers | 8,113 | 98.8 |
| 19-4061.00 | Social Science Research Assistants | 8,985 | 98.8 |
| 25-1042.00 | Biological Science Teachers, Postsecondary | 17,213 | 98.8 |
| 25-1072.00 | Nursing Instructors and Teachers, Postsecondary | 16,234 | 98.8 |
| 25-1082.00 | Library Science Teachers, Postsecondary | 8,096 | 98.8 |
| 25-2031.00 | Secondary School Teachers, Except Special and Career/Technical Education | 20,112 | 98.8 |
| 25-2051.00 | Special Education Teachers, Preschool | 11,441 | 98.8 |
| 27-4012.00 | Broadcast Technicians | 9,349 | 98.8 |
| 29-1065.00 | Pediatricians, General | 7,896 | 98.8 |
| 45-1011.06 | First-Line Supervisors of Aquacultural Workers | 8,611 | 98.8 |
| 47-5081.00 | Helpers--Extraction Workers | 5,303 | 98.8 |
| 13-2072.00 | Loan Officers | 8,210 | 98.9 |
| 15-1111.00 | Computer and Information Research Scientists | 5,633 | 98.9 |
| 17-2112.00 | Industrial Engineers | 10,978 | 98.9 |
| 17-2171.00 | Petroleum Engineers | 7,679 | 98.9 |
|  |  |  | (continued) |

## Appendix Exhibit I-11. Item Response Rates by Occupation (continued)

|  |  | SOC Title | Response |
| :--- | :--- | ---: | :---: |
| SOC Code | Questions | Rate |  |
| $25-1126.00$ | Philosophy and Religion Teachers, Postsecondary | 13,633 | 98.9 |
| $29-1123.00$ | Physical Therapists | 11,218 | 98.9 |
| $19-2012.00$ | Physicists | 6,547 | 99.0 |
| $25-1041.00$ | Agricultural Sciences Teachers, Postsecondary | 10,090 | 99.0 |
| $25-1043.00$ | Forestry and Conservation Science Teachers, Postsecondary | 9,632 | 99.0 |
| $33-9092.00$ | Lifeguards, Ski Patrol, and Other Recreational Protective Service | 10,747 | 99.0 |
| $19-3031.01$ | School Psychologists | 7,977 | 99.1 |
| $23-1023.00$ | Judges, Magistrate Judges, and Magistrates | 8,133 | 99.1 |
| $25-1071.00$ | Health Specialties Teachers, Postsecondary | 7,806 | 99.1 |
| $33-2022.00$ | Forest Fire Inspectors and Prevention Specialists | 7,126 | 99.1 |
| $25-4012.00$ | Curators | 11,892 | 99.2 |
| $25-4013.00$ | Museum Technicians and Conservators | 8,921 | 99.2 |
| $29-1199.01$ | Acupuncturists | 6,413 | 99.2 |
| $49-2021.01$ | Radio Mechanics | 5,999 | 99.2 |
| $25-1032.00$ | Engineering Teachers, Postsecondary | 7,635 | 99.3 |
| $25-1052.00$ | Chemistry Teachers, Postsecondary | 15,785 | 99.3 |
| $19-1031.02$ | Range Managers | 6,943 | 99.4 |

[^0]:    ${ }^{1}$ A total of 21 analysis cycles have been completed through June 2020. An analysis of nonresponse in Analysis Cycles 1-3 was included in the September 2005 Office of Management and Budget submission (Appendix E); an analysis of nonresponse in Cycles 4-8 was included in the December 2008 Office of Management and Budget submission (Appendix H); an analysis of nonresponse in Cycles 9-12 was included in the April 2012 Office of Management and Budget submission (Appendix E); an analysis of nonresponse in Cycles 13-15 was included in the August 2015 Office of Management and Budget submission (Appendix E); and an analysis of nonresponse in Cycles 16-18 was included in the August 2018 Office of Management and Budget submission (Appendix D).

[^1]:    ${ }^{2}$ For a discussion of weighting, see Section B.1.1 in Part B of the Supporting Statement.
    ${ }^{3}$ Establishments that had employee sampling suspended for all assigned occupations are not included in the establishment nonresponse analysis. See Section B.1.1 for a description of these procedures.

[^2]:    ${ }^{4}$ Unweighted rates were used because appropriate weights were not available for ineligible or nonresponding establishments.
    ${ }^{5}$ The tests were conditioned on the overall rates because the objective was to identify any subgroups that differed from the observed overall rate.

[^3]:    ${ }^{6}$ Response rate patterns by SIC Division and NAICS Sector were highly dependent on the occupations included in a particular collection of occupations. These findings would not, therefore, necessarily apply to a different set of occupations in different analysis cycles.

[^4]:    ${ }^{7}$ Absolute difference is the absolute value of the final column of Exhibit D-2.

[^5]:    ${ }^{8}$ Unweighted rates were used because appropriate weights were not available for nonresponding employees.
    ${ }^{9}$ The tests were conditioned on the overall rates because the objective was to identify any subgroups that differed from the observed overall rate.

[^6]:    ${ }^{10}$ The response rate for NAICS Sector Management of Companies and Enterprises was $80 \%$, but because only five employees were sampled, this figure was not considered a reliable estimate.
    ${ }^{11}$ Because no Military Specific Occupations were included among the occupations in Analysis Cycles 19-21, the response rate of $0 \%$ is not applicable to this analysis.
